Education

University of Montpellier

MASTER'S, MATHEMATICS & COMPUTER SCIENCE (MASTER MOCA — MODELING, OPTIMIZATION, COMBINATORICS, ALGORITHMS)

Montpellier, France

2012–2015

University of Nantes

BACHELOR'S, MATHEMATICS & COMPUTER SCIENCE

Nantes, France

2009–2012

Skills

DevOps	AWS (CloudFormation, CDK, CloudWatch...), Docker, Kubernetes, Grafana, GitLab CI/CD, Terraform, Jenkins
Cloud Architecture	AWS Well-Architected, microservices, event-driven design, VPC and network design, high availability, multi-region and DR, API-first and serverless patterns, multi-account landing zones
Programming Languages	Python, C#, Node.js, JAVA, C, C++, LaTeX French, English, Spanish

Certificates

- Jul 2025 **AWS Certified DevOps Engineer – Professional (DOP-C02)**, Amazon Web Services (AWS)
- Jul 2025 **AWS Certified Solutions Architect – Associate (SAA-C03)**, Amazon Web Services (AWS)
- Jul 2025 **AWS Certified Developer – Associate (DVA-C02)**, Amazon Web Services (AWS)
- Jun 2025 **AWS Certified Cloud Practitioner (CLF-C02)**, Amazon Web Services (AWS)

Experience

Qim info / International Electrotechnical Commission (IEC)

Geneva, Switzerland

CLOUD ENGINEER

Oct. 2025 - Present

Design and operation of multi-account AWS environments for several applications, with emphasis on security, scalability, and automation.

- SaaS architecture (Silo model): multi-tenant design (1 tenant = 1 AWS account) via AWS Organizations; strong isolation (network, IAM, data) and reduced blast radius.
- Multi-account governance & security: account structure (OUs, SCPs), centralized governance, least privilege, secure cross-account access.
- IaC & delivery: AWS CDK platform to deploy Docker microservices on ECS Fargate; automated tenant onboarding and standardized deployments.
- Observability (multi-account / multi-region): centralized stack with CloudWatch OAM and dedicated monitoring account; Grafana, centralized logs/metrics, alerting (CloudWatch, SNS), synthetic monitoring.
- Operations & optimization: VPC management, WAF on CloudFront, EC2 → ECS migrations, log analysis (Athena, Logs Insights).
- Stack: AWS, AWS Organizations, CDK, Terraform, ECS Fargate, Docker, CloudWatch, Grafana, WAF, Athena, Python.

Premaccess

Paris, France

CLOUD ENGINEER (FREELANCE)

Jun. 2019 - Sep. 2025

Support for multiple clients on AWS cloud transformation: migration through optimization and scale-out, with strong automation, security, and performance focus.

- Cloud migration & scalability: led migrations and continuous architecture improvements — ECS, EKS, serverless (Lambda, API Gateway), managed data (RDS, DynamoDB, Redshift, ElastiCache).
- Network & security: multi-AZ VPC (public / private / isolated subnets); Security Groups, NACLs, VPC Endpoints; IAM Identity Center, SCPs; KMS encryption.
- CI/CD & IaC: CodePipeline, CodeBuild, GitLab CI, Jenkins; CDK, CloudFormation, Terraform.
- Observability & FinOps: CloudWatch, X-Ray, Config, Security Hub; FinOps dashboards (Budgets, CUR, Cost Explorer).
- Automation & performance: internal provisioning tool (Python, Boto3); C# refactor (+40% throughput, 30% lower latency); serverless with AWS SAM; L2/L3 support and architecture reviews.
- Stack: AWS, Python, Node.js, .NET Core, Docker, Kubernetes, CDK, Terraform.

ISIKA

.NET INSTRUCTOR & SOFTWARE ENGINEER (FREELANCE)

Paris, France

Mar. 2020 - Apr. 2023

C# and .NET training with a focus on OOP and application design.

- Technical training: C# fundamentals, OOP (classes, inheritance), desktop development (WinForms).
- Application development: guided learners through full apps including data persistence (LINQ, Entity Framework, MySQL).
- Pedagogy: project follow-up and skills development through to assessed deliverables.
- Stack: C#, HTML5, Entity Framework, LINQ, MySQL, WinForms.

Bassetti

SOFTWARE QUALITY ASSURANCE MANAGER

Kolkata area, India

Feb. 2016 - May 2018

Built and led a QA organization in India: team leadership, large-scale test automation, and DevOps practices.

- Hiring & leadership: recruited, trained, and led 25+ QA engineers, scaling test capacity for product growth.
- Automation & tooling: co-designed an internal platform executing 10,000+ API tests/hour, improving coverage and efficiency.
- Quality & delivery: close collaboration with development; automated feedback loops and daily tests, shorter regression cycles.
- Process & DevOps: introduced DevOps practices, stronger QA-dev collaboration, faster release cadence.
- Stack: C#, .NET, Selenium, Jenkins, APIs, XML, Excel.

Kronos Incorporated (Ad Opt)

OPTIMIZATION ENGINEER

Montreal, Canada

Jan. 2015 - Jan. 2016

Ad Opt (Kronos) — optimization for airline crew planning (cost and operational efficiency).

- Algorithmic optimization: performance gains via column generation and shortest-path strategies on large problem instances.
- Validation: intensive testing on thousands of instances for reliability in production-like conditions.
- Production: customer deployments and integration support.
- R&D: presentations at GERAD; contribution to scientific publications.
- Stack: C, C++, Linux, GDB, Git.
